

Optimise field work with the New Holland EZ Guide Plus System

As implements get bigger, the attention demanded from the operator increases.

The New Holland EZ Guide Plus system provides both a practical and clear light bar, plus a multi view LCD screen indicating your path to follow.

Using DGPS, EZ Guide Plus memorises the path of an initial track and guides the operator in a parallel pattern for the following tracks.

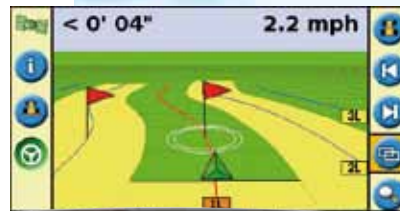

Overlaps and skips are avoided.

Input costs are reduced.

The job gets done in less time.

EZ Guide Plus keeps you working when visibility is poor. Mist, fog or lack of daylight doesn't stop you from keeping on track.

EZ Guide Plus is not built into the tractor, so you can move it from machine to machine.
